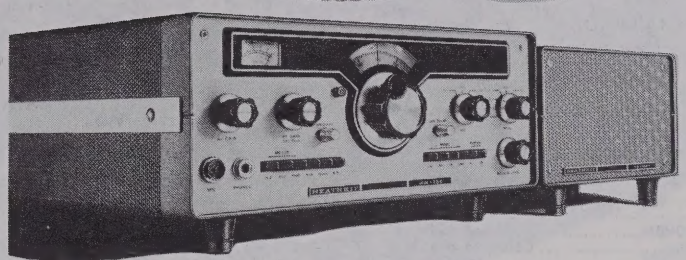
Three new money-saving reasons to build a Heathkit Transceiver



New Heathkit HW-2026 Synthesized 2M Transceiver

A true 5 kHz per step synthesizer opens every 2M channel from 144 to 147.995 MHz. Ten watts minimum output and frequency modulation. Transmitter is fully protected—even operates into an infinite VSWR without failure! "Hot" 0.5 μV sensitivity for 12 dB SINAD, Schmitt-trigger squelch with a threshold of 0.3 μV or less, a diode-protected dual-gate MOSFET front-end, IC IF, dual conversion and an 8-pole crystal filter for superior IF shape and excellent adjacent channel rejection. Linear audio response and a built-in 2" x 6" speaker. LEDs indicate when the synthesizer is locked on-frequency and warn if the channel is already in use. A mode switch selects simplex, −600 kHz offset or an "aux" crystal with a different offset frequency. A built-in continuous/burst encoder accesses most closed repeaters.

Kit HW-2026, Synthesized Transceiver 289.95
(plus 2.52 postage)

Kit HWA-202-1, AC Power Supply 32.95
(plus 1.72 postage)

New Heathkit HW-104 CW/SSB Transceiver

The same basic circuitry as our top-of-the-line SB-104. The new HW-104 is 100% solid state, with an output you can instantly switch from 100 watts to 1 watt. Its coverage extends from 3.5 to 29.0 MHz. And, if you need the top end of 10 meters, add the optional HWA-104-1 accessory. Transmissions are clean and crisp — at 100 watts third-order distortion is 30 dB down and unwanted sideband suppression is 55 dB. Broadband design virtually eliminates adjacent signal overload, yet sensitivity is less than 1 μV. 15 MHz WWV position on the bandswitch, a 15 MHz per turn spinner, 5 kHz markings on the circular dial, built-in 100 kHz/25 kHz calibrator for accuracy to 2 kHz. The 12 VDC powered and the optional noise blanker provides up to 50 dB effective blanking. For base use, buy the optional HP-1144 AC Power Supply.

Kit HW-104, Transceiver 539.95
(plus 5.56 postage)

Kit HWA-104-1, 10-M Accessory 16.95
(plus .76 postage)

Kit HP-1144, AC Power Supply 89.95
(plus 5.08 postage)

Kit HS-1661, Matching Speaker 19.95
(plus 1.40 postage)

Kit SBA-104-1, Noise Blanker 26.95
(plus .76 postage)

Kit SBA-104-2, Mobile Mount 36.95
(plus 1.56 postage)

Kit SBA-104-3, 400 Hz CW Crystal Filter 39.95
(plus .76 postage)

New Heathkit HW-2021 Handheld Two-Meter Transceiver

A top-mounted knob selects any of five crystal-controlled channels. A single crystal controls both transmit and receive. A simplex/offset switch and −600 kHz crystal actually give two transmit frequencies for every crystal you buy — just like having a 10-channel transmitter! Transmitter output is one watt minimum with 0.005% (or better) stability. Frequency modulation and a separate built-in mike provide a better signal. Receiver features 0.5 μV sensitivity for 12 dB SINAD and a squelch threshold of 0.3 μV or less.
Built-in nickel-cadmium batteries and a separate AC charger.
Optional HWA-2021-3 Auto-Patch Encoder accesses telephone lines through repeaters with touch-tone input. The HW-2021 weighs just two pounds, including batteries. To make the HW-2021 an even better value, we've included accessories worth up to $60 — a crystal for 146.94 MHz, a −600 kHz offset crystal, a flexible "rubber duckie" antenna plus an output for an external antenna, a built-in nickel-cadmium battery pack and a separate AC charger.

Kit HW-2021, Handheld Transceiver 169.95
(plus 1.40 postage)

Kit HWA-2021-3, Auto-Patch Encoder 39.95
(plus .92 postage)

HWA-2021-2, Carrying Case 12.95
(plus. 76 postage)

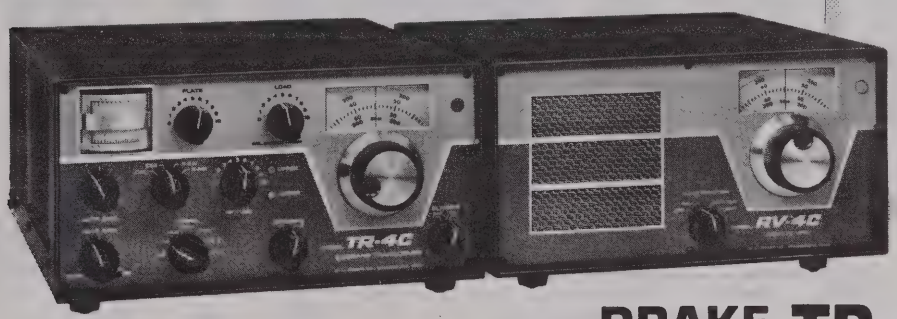
Some GOOD REASONS for going to Drake TR-4C:

Super-stable Drake PTO...

no need to chase the guy down the band

Excellent linearity— 1 kHz Direct Dial Readout



No need to interpolate from knob skirt

Highly effective solid state full gating Noise Blanker

not just a simple noise limiter; 17 transistors, 4 diodes

Calibration remains the same in switching between modes

(USB to LSB, SSB to CW, etc.)

TR-4C SPECIFICATIONS: • **Frequency Coverage:** Full Coverage on all amateur bands 80 thru 15 meters and one 10 meter segment, in five 600 kHz ranges: 3.5 to 4.1 MHz, 7.0 to 7.6 MHz, 13.9 to 14.5 MHz, 21 to 21.6 MHz, 28.5 to 29.1 MHz. Accessory crystals needed for 28 to 28.6 MHz and 29.1 to 29.7 MHz ranges. • **Solid State VFO:** Has linear permeability tuning. Tunes 4.9 to 5.5 MHz for all ranges. • **Dial Calibration:** Two concentric dials. 100 kHz Markings on one dial and 1 kHz divisions on second dial. • **Frequency Stability:** High stability solid state VFO tunes same range on all bands. Drift is less than 100 cycles after warm-up, and less than 100 cycles for plus or minus 10% line voltage change. • **Modes of Operation:** SSB Upper and Lower Sideband, CW and AM. • **Misc:** 20 tubes including voltage regulator; two transistors; 8 diodes; 100 kHz crystal calibrator built in; Dimensions: 5½" high, 10¾" wide, 14 3/8" deep. Weight: 16 lbs . . .

TRANSMITTER: • **Single Sideband:** 300 watts P.E.P. input power, VOX or PTT. Two special 9 MHz crystal filters provide upper or lower sideband selection on any band, without the necessity of shifting oscillators. • **CW:** Power input 260 watts. Carrier is shifted approximately 1000 cycles into one sideband, and mixer and driver are keyed. Grid block keying is free from chirps and clicks. Automatic transmit/receive switching when key is operated. CW sidetone oscillator for monitoring. • **AM:** Controlled carrier AM screen modulator is built-in. 260 watts P.E.P. input. Low carrier power increases 6 times to 50 watts output at maximum modulation. This system is compatible with SSB linears. VOX or PTT. Diode detector used for receiving on this mode. Product Detector can be used by switching manually . . .

RECEIVER: • **Sensitivity:** Less than ½ microvolt for 10 dB S/N • **I.F. Selectivity:** 2.1 kHz at 6 dB, 3.6 kHz at 60 dB. • **Antenna Input:** Nominal 50 ohms. • **Audio Response:** 400 to 2500 cycles at 6 dB. • **Audio Output Power:** 3 watts. • **Impedance:** 4 ohms.

DX OPERATING CODE

(For W/VE Amateurs)

Some amateur DXers have caused considerable confusion and QRM in their efforts to work DX stations. The points below, if observed by all W/VE amateurs, will help make DX more enjoyable for all.

1. Call DX only after he calls CQ, QRZ? or signs SK, or 'phone equivalents thereof. Make your calls short.

2. Do not call a DX station:
   a. On the frequency of the station he is calling until you are sure the QSO is over (SK).
   b. Because you hear someone else calling him.
   c. When he signs KN, AR or CL.
   d. Exactly on his frequency.
   e. After he calls a directional CQ, unless of course you are in the right direction or area.

3. Keep within frequency band limits. Some DX stations can get away with working outside, but you cannot.

4. Observe calling instructions given by DX stations. Example: "15U" means "call 15 kc. up from my frequency". "15D" means down, etc.

5. Give honest reports. Many DX stations depend on W/VE reports for adjustment of station and equipment.

6. Keep your signal clean. Key clicks, ripple, feedback or splatter give you a bad reputation and may get you a citation from FCC.

7. Listen and call the station you want. Calling CQ DX is not the best assurance that the rare DX will reply.

8. When there are several W or VE stations waiting, avoid asking DX to "listen for a friend". Also avoid engaging him in a rag chew against his wishes.

(For Overseas Amateurs)

To all overseas amateur stations:

In their eagerness to work you, many W and VE amateurs resort to practices which cause confusion and QRM. Most of this is good-intentioned but ill-advised; some of it is intentional and selfish. The key to the cessation of unethical DX operating practices is in your hands. We believe that your adoption of certain operating habits will increase your enjoyment of amateur radio and that of amateurs on this side who are eager to work you. We recommend your adoption of the following principles:

1. Do not answer calls on your own frequency.

2. Answer calls from W/VE stations only when their signals are of good quality.

3. Refuse to answer calls from other stations when you are already in contact with someone, and do not acknowledge calls from amateurs who indicate they wish to be "next".

4. Give everybody a break. When many W/VE amateurs are patiently and quietly waiting to work you, avoid complying with requests to "listen for a friend".

5. Tell listeners where to call you by indicating how many kilocycles up (U) or down (D) from your frequency you are listening. Examples: c.w. - "CQ DX CQ DX CQ DX 15U DE AC4YN AC4YN AC4YN 15U K"; 'phone - "Answer 15 kilocycles up from my frequency".

6. Use the ARRL-recommended ending signals, especially KN, to indicate to impatient listeners the status of the QSO. (KN means "Go ahead (specific station), all others keep out".

7. Let it be known that you avoid working amateurs who are constant violators of the above principles.

Notes on the Use of QN Signals

1. The QN signals listed above are special ARRL signals for use in amateur c.w.nets only. Other meanings that may be used in other services do not apply.

2. Some QN signals are for use by net control stations only; these are marked with an asterisk (*). Others have slightly different meanings when used by the NCS and net stations; in this case, the meaning when used by the NCS is marked with an asterisk (*

3. Some QN signals have two meanings, the difference depending on how or by whom used. Examples: (a) QNC, when used as a preface to transmission of a message, carries its first meaning; when used by a station reporting into the net (e.g.,W9NCS DE W9NET QNI QNC), it carries its second meaning. (b) QNI, when used by the NCS, is a request for stations to report in; when used by a net station, it means that this station is reporting in. (c) QNJ, when used alone, carries its first meaning; when followed by a call, it carries the second meaning.

4. QN signals are never followed by a question mark, even though the meaning may be interrogatory.

5. Do not use QN signals on phone nets. Say it with words.

6. Use QN signals in nets only. They are not for use in casual amateur conversation.

7. Make frequent use of standard international "Q" signals in traffic nets, for meanings not covered by QN signals. Examples: QRU, QRV, QSV, QTA, QTB, QTX, etc.

ON GOOD PHONE OPERATING

1. *Listen much . . . with care.* Avoid distractions in your operating room. Tune the band well after each call.
2. *Time your calls; monitor your own frequency.* Call only when a station is free.
3. *Make short calls, with breaks to listen.* Speak clearly, at a steady, modest rate. Three short calls are better than one long one.
4. *Use push-to-talk technique . . . speak near the mike.* Watch the modulation indicator. Keep local background noise at a minimum.
5. *Make notes. Avoid missing points for comment.* Jot down topics to avoid repeats.
6. *Talk in connected thoughts and phrases.* Notes will help avoid mixing up subjects. Push-to-talk technique will keep brother amateurs from calling you a monologuist.
7. *Speak naturally.* QSOs need not be cut and dried. Make them interesting. Avoid exhibitionism. Use proper operating form to promote efficiency in communication and add respect and prestige for your station.

Use of this standard list is recommended by ARRL. Haphazard selection of words often results in confusion. A degree of uniformity in use of phonetic words reflects favorably on your individual operating, and on the whole amateur service.

ARRL SAFETY CODE

1. KILL ALL POWER CIRCUITS COMPLETELY BEFORE TOUCHING ANYTHING BEHIND THE PANEL OR INSIDE THE CHASSIS OR THE ENCLOSURE.

2. Never allow anyone else to switch the power on and off for you while you're working on equipment.

3. Don't shoot trouble in a transmitter when you're tired or sleepy.

4. Never adjust variable links by hand. Use special care when checking energized tank circuits with absorption-type wavemeters.

5. Avoid bodily contact with grounded metal (racks, radiators) or damp floors when working on the transmitter.

6. Never wear phones while working on gear.

7. Follow the rule of keeping one hand in your pocket.

8. Instruct members of your household HOW to turn the power off, and HOW to apply artificial respiration. Instruction sheets on the latest approved method of resuscitation can be obtained from your local Red Cross office.

9. Develop your own safety technique. TAKE TIME TO BE CAREFUL. DEATH IS PERMANENT.

RULES FOR EQUIPMENT DESIGN AND CONSTRUCTION

ONE DISCONNECT SWITCH

A single plainly-labeled main switch should be provided to cut off all power from the equipment.

POWER SUPPLIES

All power supplies should be so enclosed or constructed that accidental bodily contact with power circuits is impossible.

All negative plate-supply and positive bias-supply terminals should be connected to the chassis and the chassis connected to a water pipe or other good ground connection.

Every power supply should use a conservatively-rated bleeder resistor. If it is placed on top of the chassis for ventilation, cover it with screening or perforated metal. When using shielded wire for external power cabling, make sure the shielding is grounded to protect you in case of insulation breakdown.

PANEL CONTROLS AND METERING

Every control shaft extending through the front of the panel should be at ground potential. The frames of key or metering jacks should be fastened to the grounded panel. Meters, unless connected in the cathode or centertap, should be recessed to avoid danger of contact with the adjusting screw.

AUDIO EQUIPMENT

In addition to the construction rules set forth for power supplies, the following rule should be followed for speech equipment. The microphone stand and the enclosure should always be connected to the microphone-cable shield which, in turn, should be grounded to the chassis.

LIGHTNING PROTECTION

Merely "grounding everything" is not adequate protection from direct lightning strikes or static build-up. Lightning has devious methods of going where it isn't supposed to. There is only one way to protect your radio from lightning, and that is to disconnect everything completely and then ground all the disconnected lines. This applies to incoming power circuits, also; "pulling the big switch" is an old adage which makes sense. Finally, pay special attention to rotor control boxes; a lightning strike can come into the box via the control cable, go through the control box, out the power cord, and through your "cube-tap" (or whatever) and thence up the power cord of your radio, even though all power cords have been disconnected from the wall socket! Please, HANDLE EVERY CIRCUIT WITH CARE. The lowly 110-115 volts has caused more electrocutions than any other.

STANDARD TIME THROUGHOUT THE WORLD

The standard time system is based on the theoretical division of the surface of the globe into 24 zones, each of 15° of longitude. The initial zone is the one which has as its central meridian the Greenwich Meridian and with the meridians 7° 30' E. and 7° 30' W. as its eastern and western limits. Time in this zone is called Greenwich Mean Time, or GMT. Places to the east of Greenwich have faster time than Greenwich, while places to the west have slower time. Not all countries follow the International Time Zone System, but some use the time of some principal city as a standard and others have no standard time.

Reference - "Standard Time Chart of the World" No. 5192, published by U. S. Navy Hydrographic Office, Washington, D.C.

The theoretical system described is applied, in a strict sense, only in oceanic regions. On land or on groups of islands the system is applied with certain local deviations, which, are rendered necessary by frontiers, convenience of an entire island group to maintain same zone time, etc. The time used in each country, whether it is the time of the corresponding zone or modified for reasons given, is an hour fixed by law and, for this reason, is called legal time, or more generally standard time.

Another deviation from this theoretical system is that certain countries, for economic reasons, modify their legal time for part of the year, especially in summer, by advancing it an hour or another fraction of time. Where such deviations are maintained on a year-round basis, the time kept is considered to be standard time.

The above table shows the great circle bearing in degrees, of various metropolitan areas in the United States in relationship to each other. This table should be used from left to right only. To find the great circle bearing between any two of the cities shown, start at the left and follow the horizontal line to the right until you come to the column directly under the name of the city that you desire to beam a radio signal to. For all practical purposes in the United States, Polaris (the North Star), is due north. To find this star, to calibrate a directional radio beam, look for the first star on a straight line with the two outer stars on the outside edge of the cup of the big dipper. This table was compiled from information furnished by the U. S. Coast and Geodetic Survey.

With this chart you can convert standard time in any time zone to GMT or tell what time it is in other parts of the world. To correctly use this chart visualize each horizontal line as a complete circle. From your time zone tracing horizontally to the right (Counter Clockwise) it will be tomorrow when you pass midnight and yesterday when you pass the international date line. To the left (Clockwise) it will be yesterday when you pass midnight and tomorrow when you pass the international date line. There is no change in date when you pass both midnight and the international date line going in one direction. For instance at 8 PM in New York Eastern Standard Time it is 2 AM tomorrow in Berlin, Germany and 11 AM tomorrow in Sydney, Australia. Always trace in the shortest direction from your time zone to find what time it is in any other zone.

The above table shows the great circle bearing in degrees, of various metropolitan areas in the United States in relationship to large cities throughout the world. This table should be used from left to right only. To find the great circle bearing between any two of the cities shown, start at the left and follow the horizontal line to the right until you come to the column directly under the name of the city that you desire to beam a radio signal to. For all practical purposes in the United States, Polaris (the North Star), is due north. To find this star, to calibrate a directional radio beam, look for the first star on a straight line with the two outer stars on the outside edge of the cup of the big dipper. This table was compiled from information furnished by the U. S. Coast and Geodetic Survey.

PLEASE NOTE - THERE HAS BEEN A NEW FEATURE ADDED IN SOME LISTINGS OF THIS ISSUE. IN COUNTRIES WHERE CLASSES OF LICENSE ARE ASSIGNED AND INFORMATION IS AVAILABLE, THE CLASSES ARE NOTED BY A NUMERAL APPEARING BETWEEN THE CALL LETTERS AND THE NAME OF THE AMATEUR. SINCE EACH COUNTRY HAS INDIVIDUAL REQUIREMENTS, THE CLASSES ARE ON A GRADUATED SCALE OF 1-7,WITH THE LOWER NUMERALS INDICATING A LESSER STAGE OF ADVANCEMENT,A LESSER FREQUENCY RANGE OR A SMALLER SIZE EQUIPMENT,DEPENDING UPON THE PARTICULAR REQUIREMENTS OF EACH COUNTRY.THE NUMERAL 7 ALWAYS INDICATES A CLUB STATION
